

Shaping Tomorrow
with AI Today

Beyond the algorithm:
Tackling gender bias in AI with your
Product Teams

60+ Years

Quick Disclaimer

I am not here to blame or make anyone
feel guilty.

We're here to build awareness, and explore
practical tools you can use to tackle gender
bias.

BEARS 5 steps

Beginnings

Exchange

Apply

Reflect

Sustain

Interactive session and you have the right to pass.

This is a learning space, not a blaming space.

Where does bias live?

Take 60 seconds each:

Where have you experienced or seen bias in a product or technology?

Write it down on a sticky note

Where does bias live?

Think of a product or AI tool you use daily.

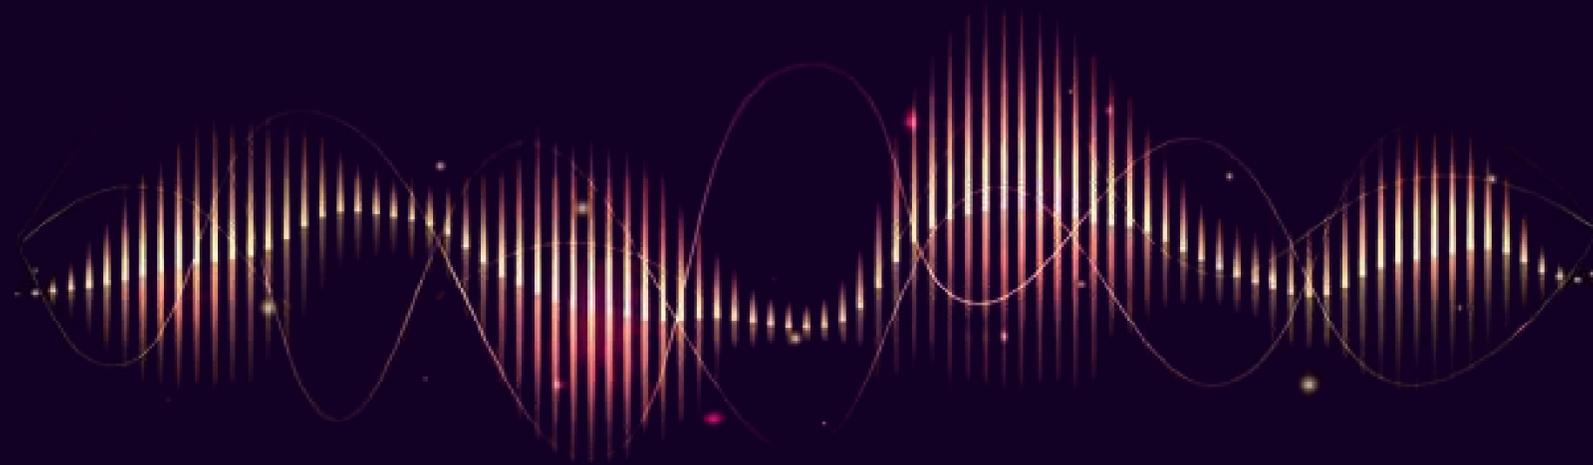

How might it behave differently
for men vs. women?

Where does bias live?

Raise your hand if you work with AI in your products?

Keep your hand up if you've specifically
checked for gender bias in that AI?

“I’m sorry, I didn’t understand that.”

Voice recognition bias is real

Heart attack misdiagnosis in women is real

Voice assistant emergency failures happen

The Amplifier Effect

Human Bias

- Humans discriminate at human scale
- Human bias is inconsistent
- Human bias affects decisions
- Humans can consciously break historical patterns

Example: A hiring manager unconsciously favors candidates who remind them of themselves.

AI Bias

- AI discriminates at machine scale.
- AI bias is systematic.
- AI bias affects entire populations.
- AI learns from historical patterns

Example: An automated resume screener rejects all female candidates because it learned from historical male-dominated data.

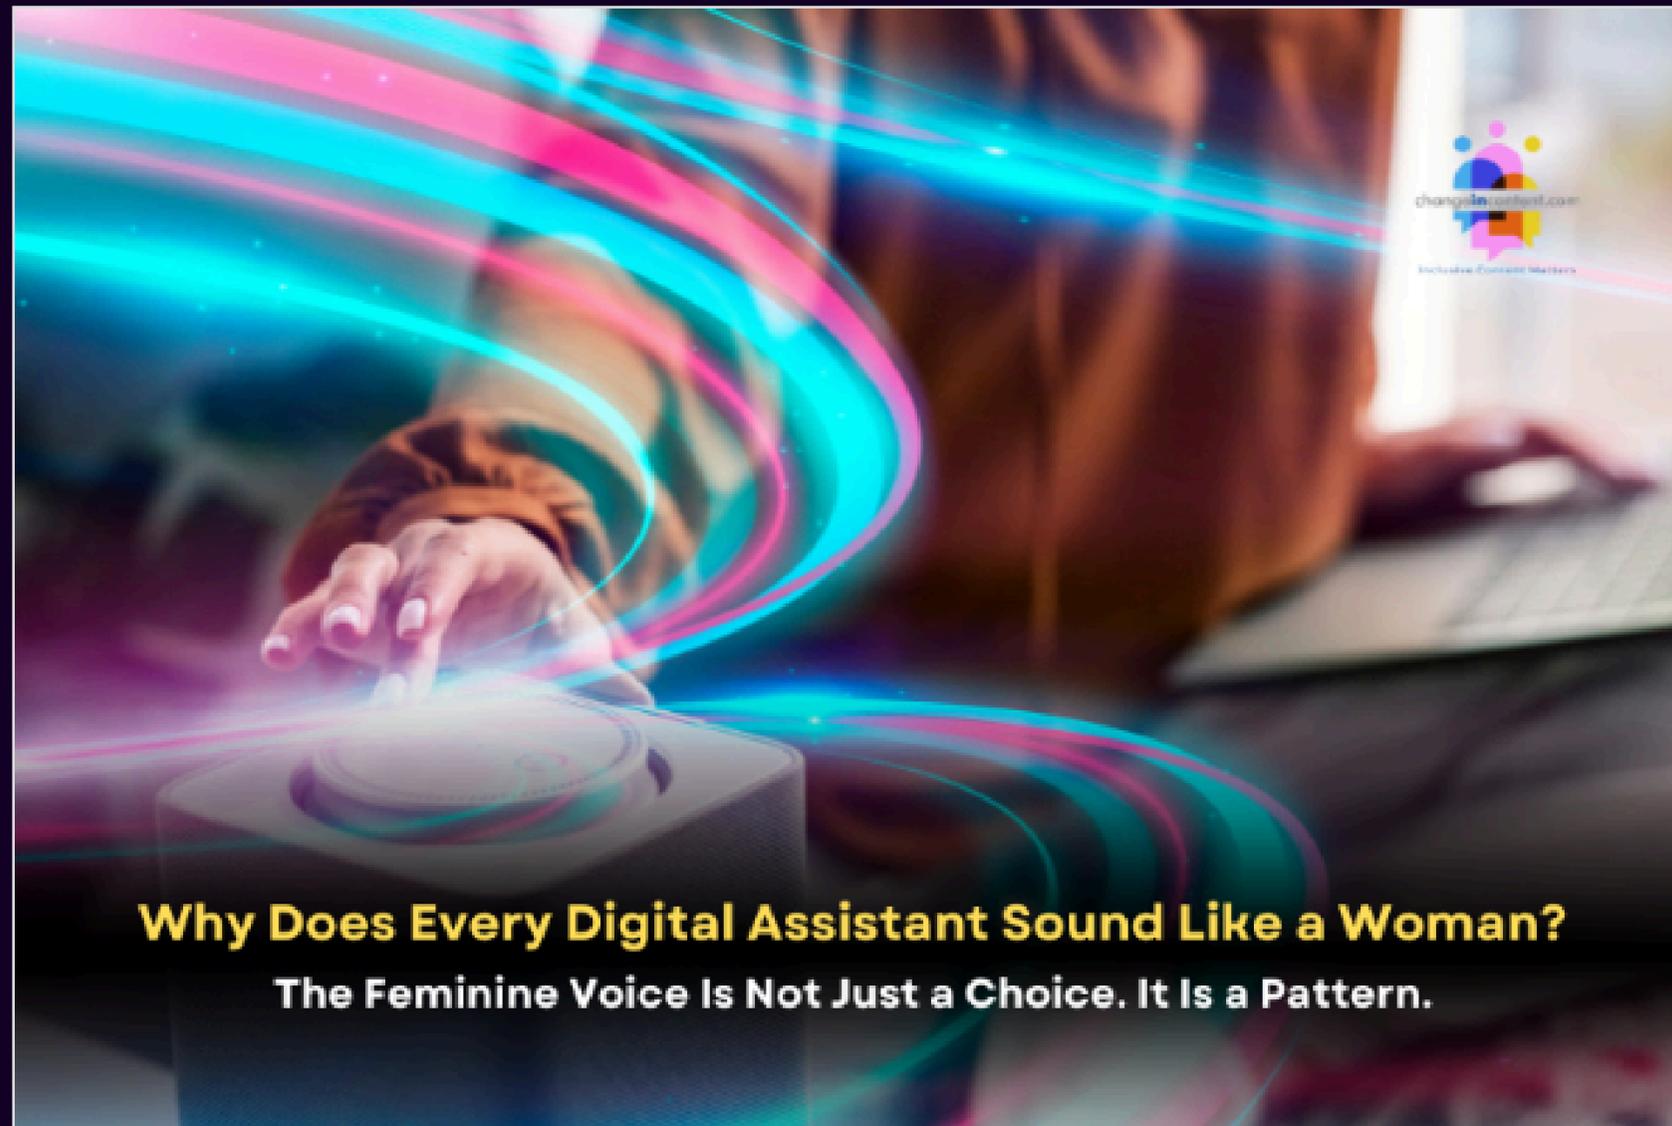

My 'She' AI

What is the most 'gendered' piece of technology you interact with?

Is your GPS voice female? Your scheduling assistant? Why?

How does this default setting shape user perception?

Why Does Every Digital Assistant Sound Like a Woman?

The Feminine Voice Is Not Just a Choice. It Is a Pattern.

Why the Feminine Voice for Digital Assistants Reflects Deep Gender Bias

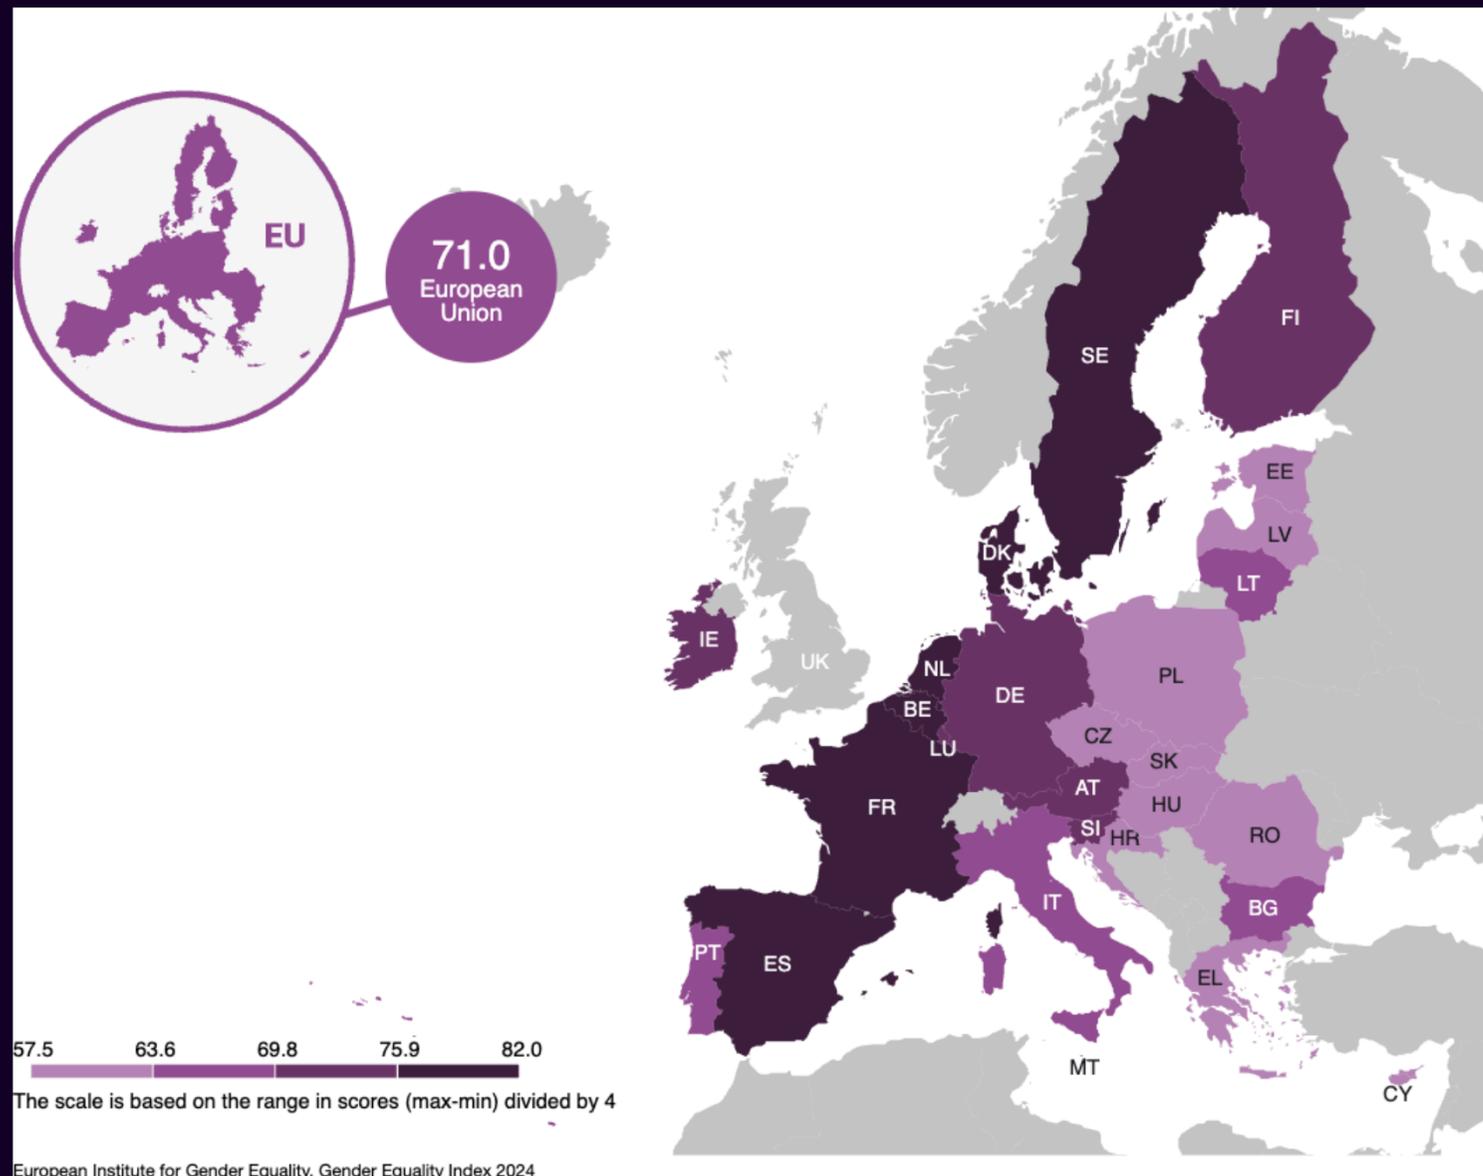

Why do Siri, Alexa, and ChatGPT sound like women? This article explores the gender coding behind the feminine voice for digital assistants and why it needs to change.

What did you see?

Do a search on “Leader” on Google

The image shows a Google search interface for the term "leader". The search bar at the top contains the word "leader" and includes icons for voice search, image search, and a magnifying glass. The search results are displayed as a grid of 15 image thumbnails, each with a small source icon and a caption. The thumbnails illustrate various concepts of leadership, such as guiding a team, standing on a peak, and being a role model.

Women in Agile EUrope

What is gender bias?

Gender bias is unfair treatment based on someone's gender.

Bias forms through learned associations and past experiences.

Historical norms made men the 'default' in leadership, authority, and expertise.

Why This Matters Now

- Small bias entering a model → larger bias after scaling
- 44% of AI systems show gender bias*
- Rise of generative AI in UX
- Regulatory pressure (EU AI ACT)

Real World Impact

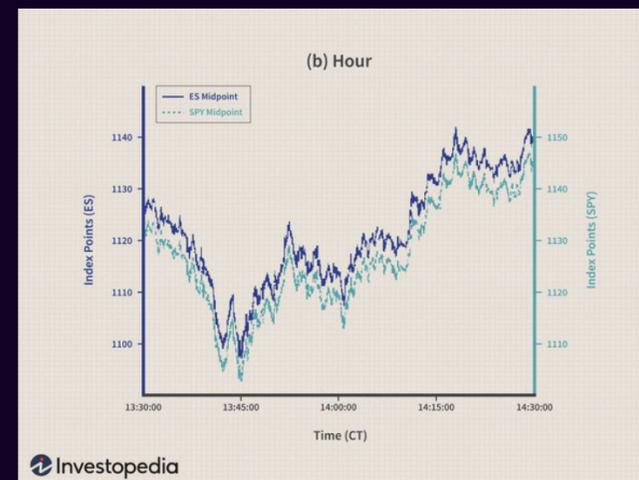

Health

AI diagnostic tools failing to recognize heart attack symptoms in women, which present differently than men.*

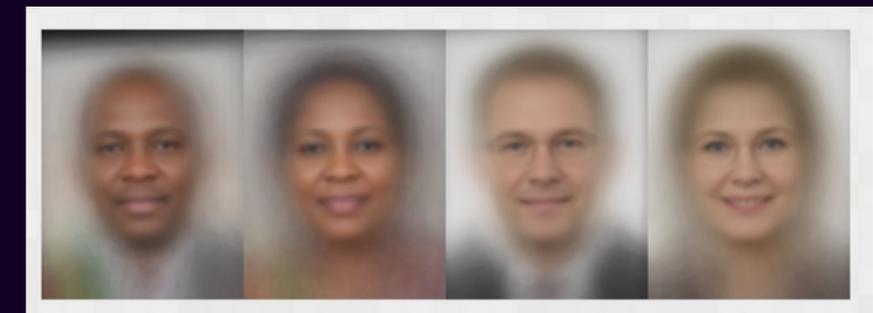

Finance

Credit limit algorithms offering significantly lower limits to women than their husbands, despite identical assets.**

Recognition

Facial analysis software misclassifying darker-skinned female faces at error rates of up to 35%.***

Insight - Amazon scraps secret AI recruiting tool that showed bias against women

By Jeffrey Dastin

October 11, 2018 2:50 AM GMT+2 · Updated 7 years ago

Aa 

did not like women.

▶ 10x 00:09 / 02:01   

Model trained on male-dominated historical data.

Biased or incomplete training data

The Gender Bias Built Into AI – And Its Threat to Women’s Health

David Alvaro, Ph.D. [in](#)

Editor in Chief
Pharma's Almanac

Apr 14, 2025 PAO-04-25-NI-07

AI in healthcare risks misdiagnosing women due to missing sex-specific data.

AI in courts reinforced victim-blaming

AI added harmful bias to survivor testimonies, showing the danger of using it without ethical guardrails.

The ChatGPT gender bias in image generation

“can you create a realistic image of 10 leaders discussing gender inequality” (2023)

The ChatGPT gender bias in image generation

“can you create a realistic image of 10 leaders discussing gender inequality” (2025)

AI and Gender Inequality: A growing Risk

1

Teams who
create products

Women are underrepresented
in tech

- Only 22% of AI jobs
- Just 2% of EU tech funding goes to women-led startups

2

The Product

- Bias is built into products
- Bias is already built into AI systems

3

Users of AI

- Women using AI less, risk of future inequality
- Cyber violence silences women (deepfakes, online bullying)

It's a Product Problem

data → model → decisions → user experience.

It's Real

Gender bias in AI is already affecting real products and real people today. It is not hypothetical. ✱

Built In

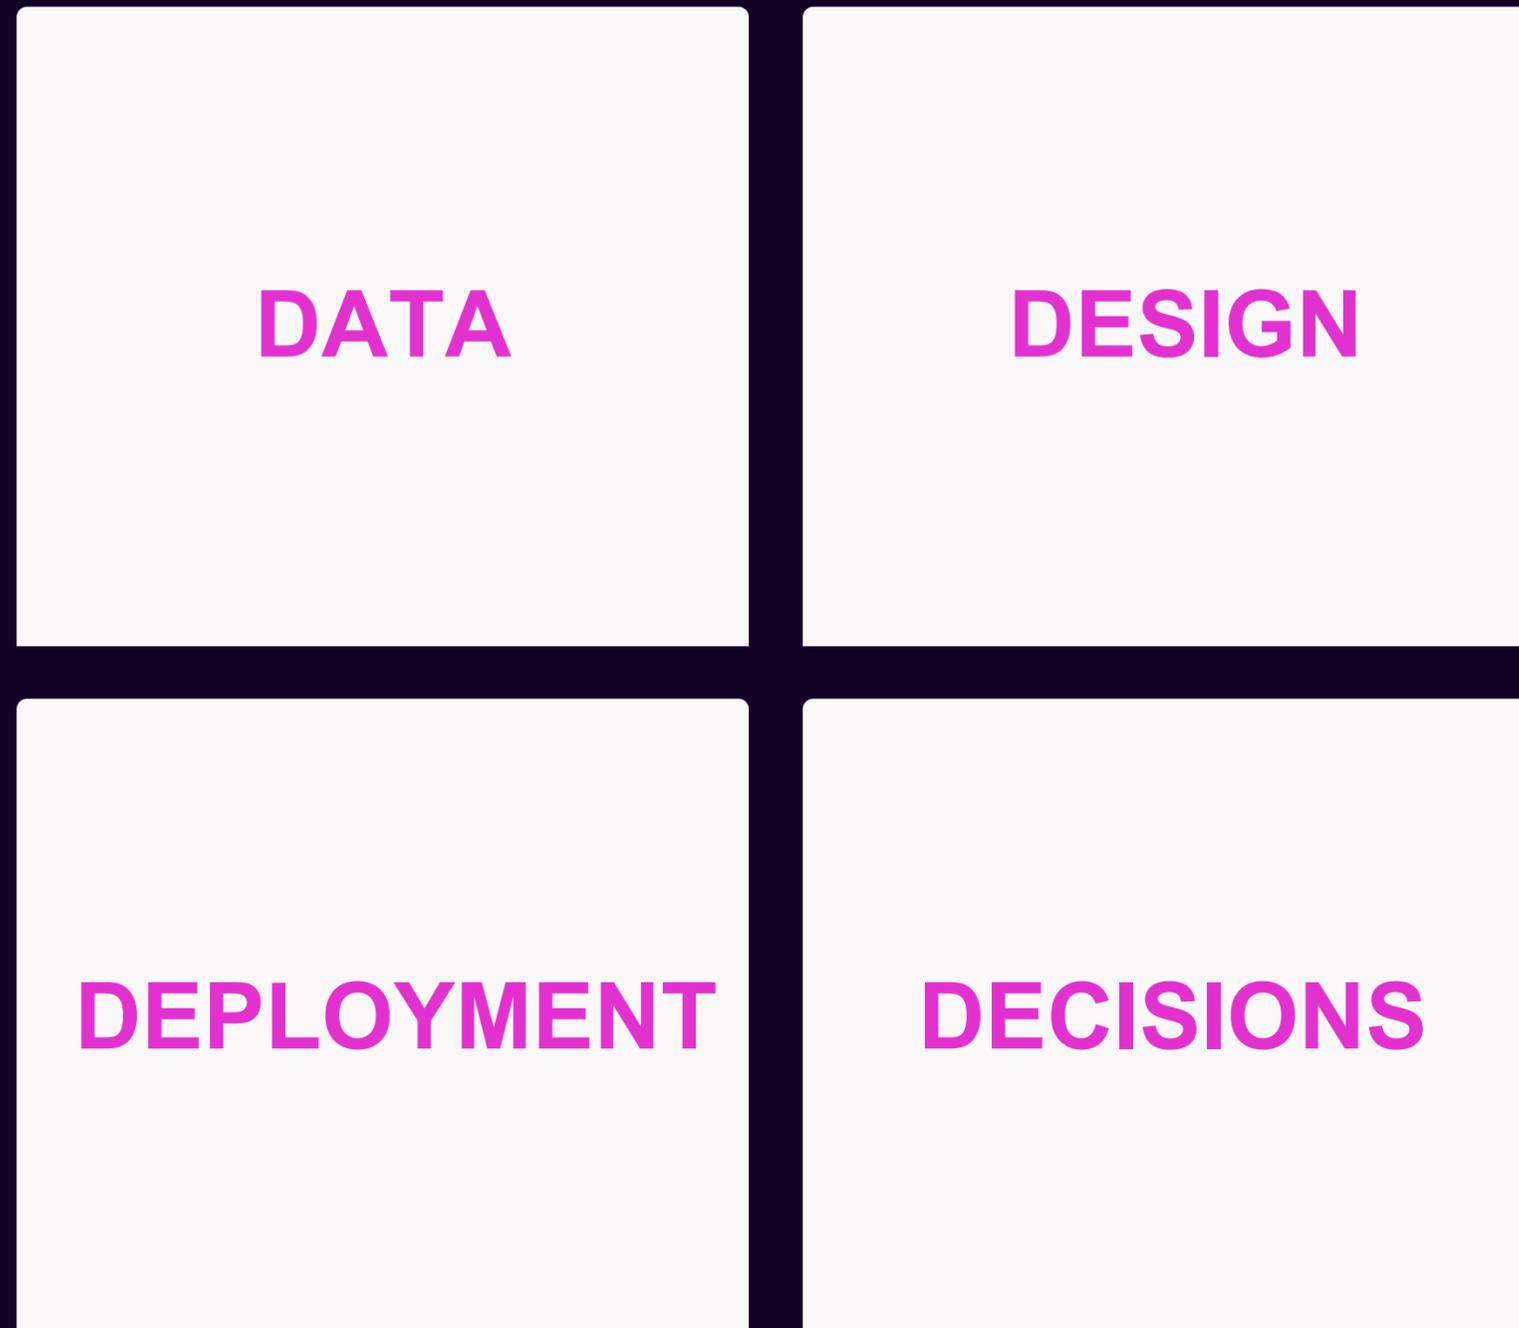

Inclusion must be built into every product decision from the start, not bolted on after release. 💡

Agile Fit

Agile teams already have the mindset (inspection) and structure (reviews) to detect address bias early. 🤖

The four Ds framework

Where gender bias enters AI Systems (and where your team can intervene)

The four Ds framework

Where gender bias enters AI Systems (and where your team can intervene)

1. DATA

What data are we training on?

- Who's included?
- Who's missing?
- What's being measured?

2. DESIGN

What assumptions are we building into the product?

- What's "normal"?
- Who did we design for?
- What did we not consider?

3. DEPLOYMENT

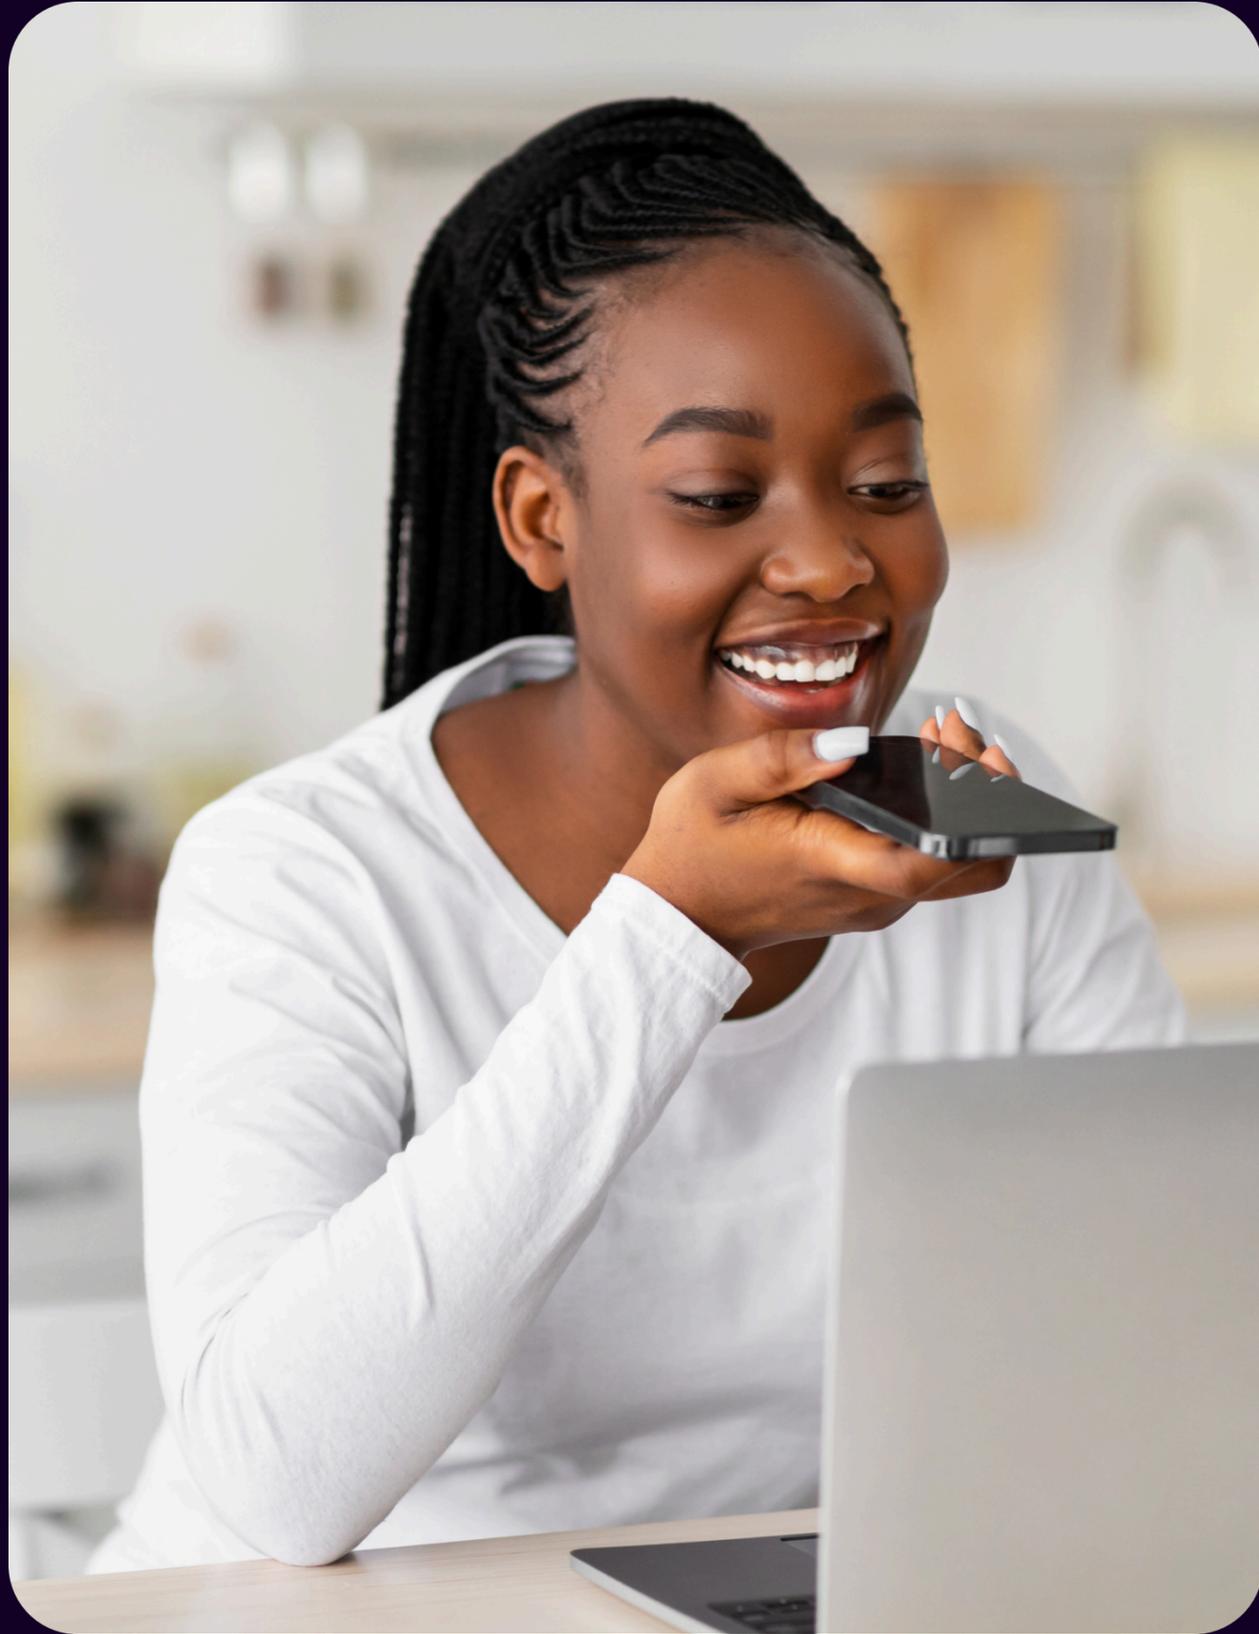

How are we testing and releasing this?

- Who's testing?
- Who's affected?
- Who monitors after release?

4. DECISIONS

Who has power to question and challenge this?

- Is it safe to speak up?
- Who has final say?

DATA

**The Voice Assistant that
couldn't hear women**

What data might be missing or
underrepresented in YOUR product?"

DESIGN

The Health App that didn't track "Female Problems"

What assumptions about 'normal users' might be built into your product design?

DEPLOYMENT & DECISIONS

The Hiring AI that preferred men

Who on your team has permission to challenge AI decisions? Who should?

Which of these five stages do you think YOUR team has the biggest influence on?

Data collection

Labeling

Model training

Product decisions

Feedback loops

Interventions

Definition of Done

Retro Bias Lens questions

Backlog Bias Review

Definition of Done

Before (Traditional DoD):

Code reviewed

Tests passing

Documentation updated

Deployed to staging

After (Inclusive DoD):

Code reviewed

Tests passing (including edge cases for diverse inputs)

Reviewed by team members from different backgrounds

Documentation updated (checked for gendered language)

Deployed to staging

Tested by diverse user group (not just QA team)

Feedback channels confirmed working

Retro Bias Lens questions

Data reflection

"Let's talk about the data and information that informed our Sprint..."

Design reflection

"Let's talk about design choices and product decisions..."

Deployment reflection

"Let's talk about testing, releasing, and monitoring..."

Decisions reflection

"Let's talk about power and voice..."

Toolkit

Each group uses the toolkit to:

Identify which of the Four Ds is involved (2 min)

Use the relevant toolkit section to detect the bias (4 min)

Design one intervention (Definition of Done item, retro question, or backlog refinement) (4 min)

Prepare 30-second share (2 min)

Shift & Share

One person stays at table to share their solution

Others rotate to see 2-3 other table solutions

Return to home table

Personal Reflection

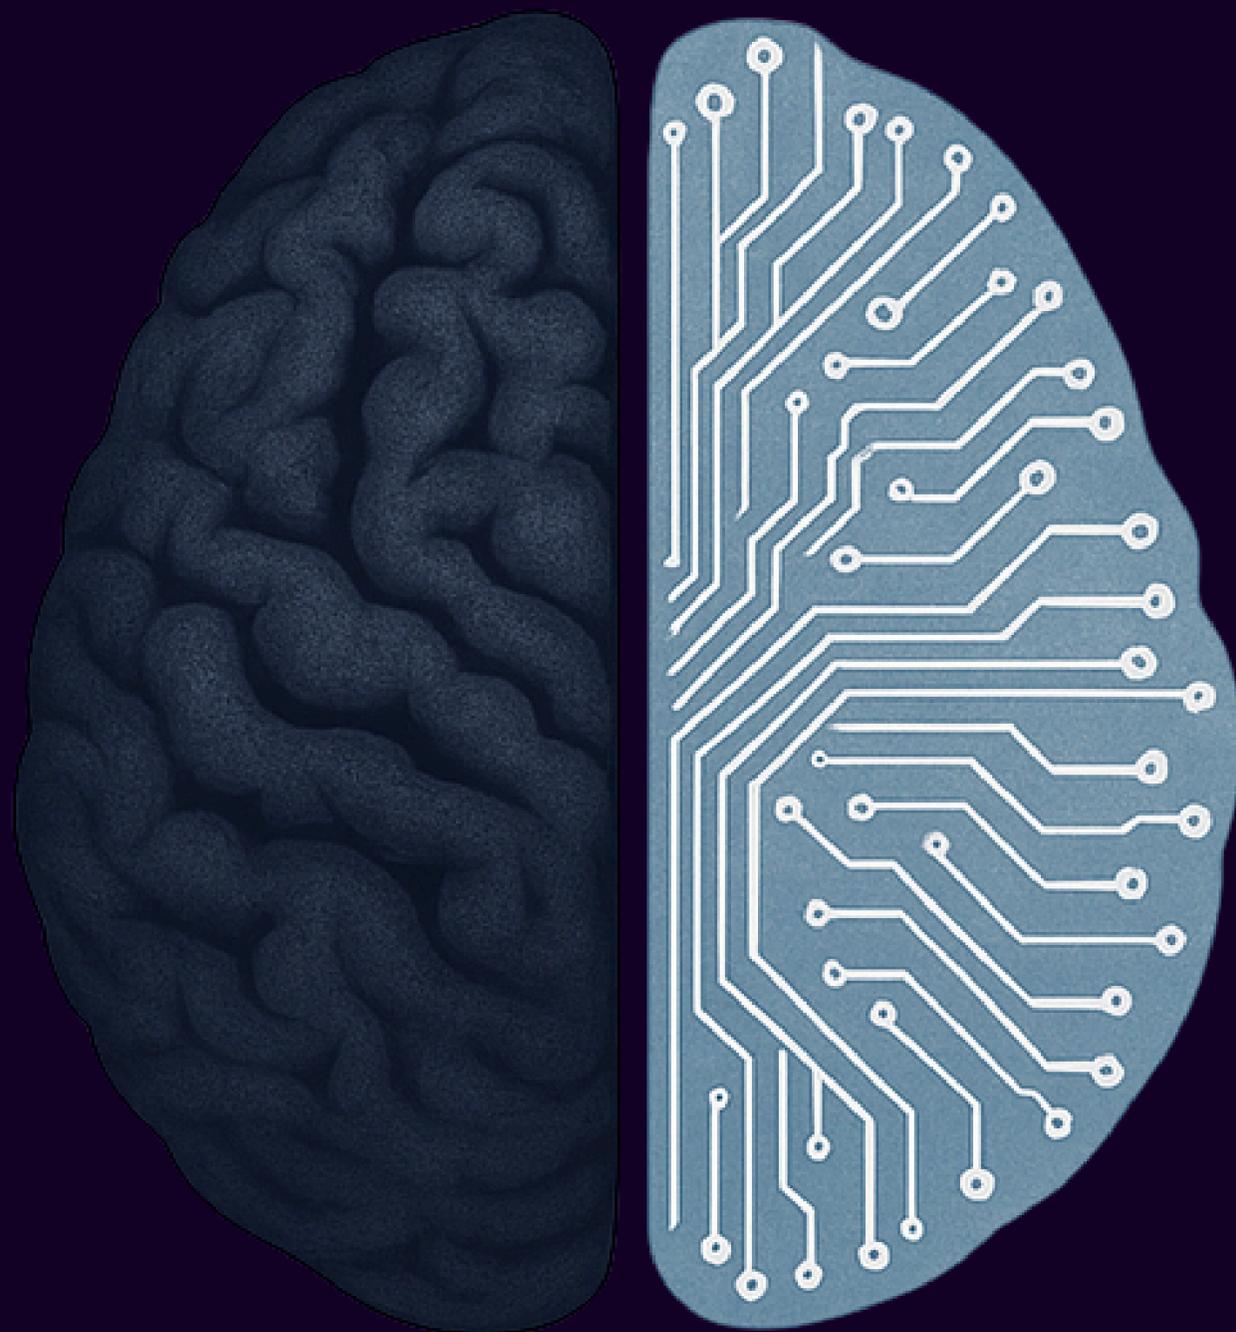

"Where might bias already exist in your product?"

"What would it take for someone on your team to speak up about it?"

"What's one assumption you're going to question next Sprint?"

Write on individual sticky notes

Bias in = bias out

ONE action you'll take Monday

Add one inclusion question to your
Definition of Done

Add bias lens to your next
retrospective

Review one backlog item through the
Four Ds

Start a conversation about
who can challenge AI
decisions

**This is not just a tech problem.
It's a product problem.
It's a team problem.**

**And you now have the tools to solve it,
one Sprint at a time.**
