# Beat the clock

---

Why use brain science in  
Scrum Events?

Complete the sentence: “To  
get more...”

# Why use brain science in Scrum Events?

---

- Focus
- Attention
- Better problem solving
- Creativity
- Openness
- Activation of participants
- Commitment
- Engagement

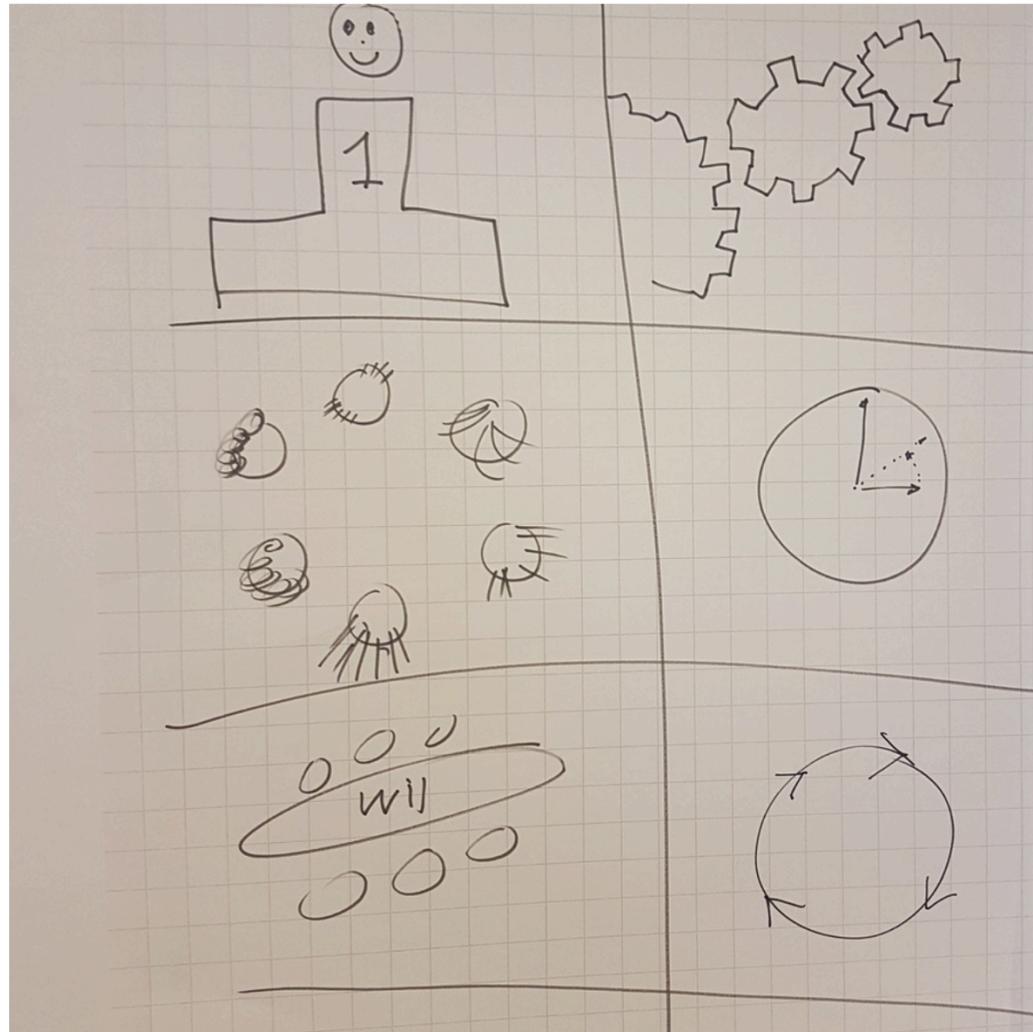

---

Take an A4 paper  
Fold it so you have 6 boxes

*We follow these principles:*

Our highest priority is to satisfy the customer through early and continuous delivery of valuable software.

Welcome changing requirements, even late in development. Agile processes harness change for the customer's competitive advantage.

Deliver working software frequently, from a couple of weeks to a couple of months, with a preference to the shorter timescale.

Business people and developers must work together daily throughout the project.

Build projects around motivated individuals. Give them the environment and support they need, and trust them to get the job done.

The most efficient and effective method of conveying information to and within a development team is face-to-face conversation.

# Images over words

Our brains are primarily wired to process images

# Movement over sitting

---

Exercise boosts brain power

# Talking over listening

---

Talking and discussing  
stimulates deeper cognitive processing

# Teach back

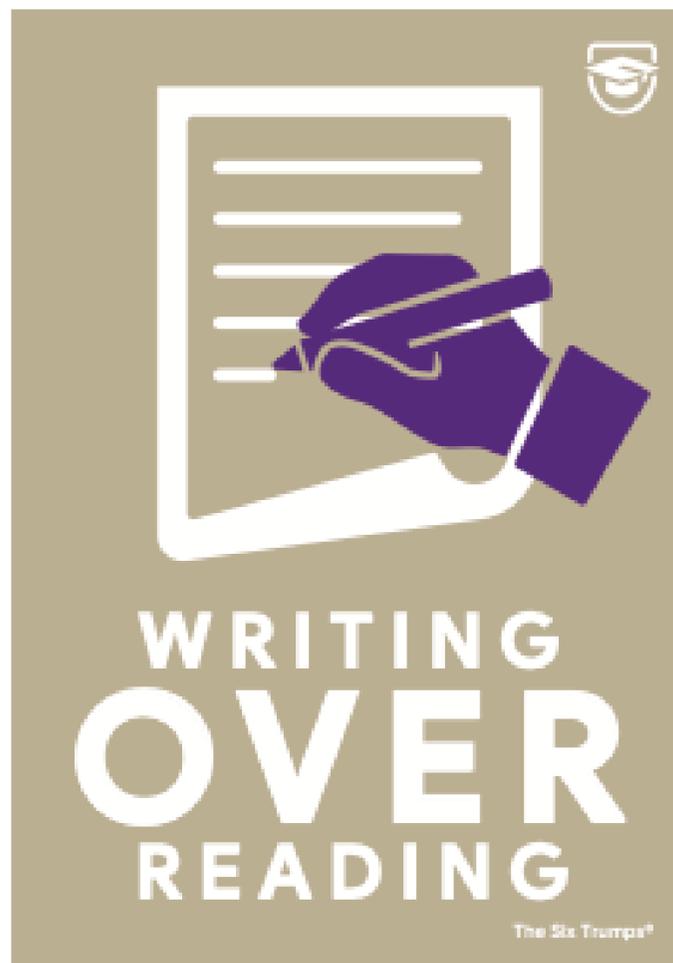

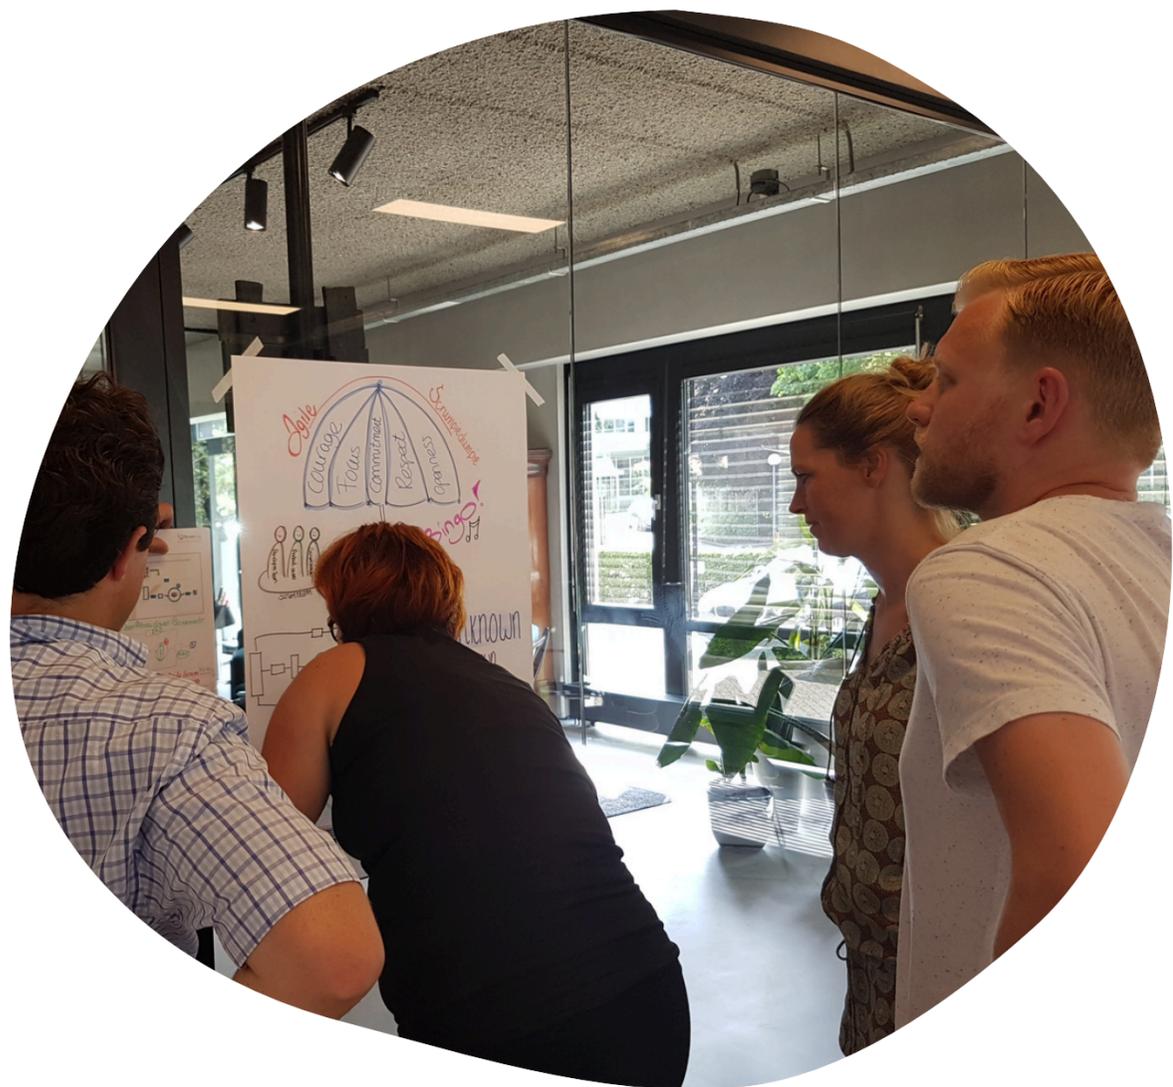

---

Stand up

Choose one of the brain science principles of your sheet

Explain it to someone at another table, take turns

# Writing over reading

---

Writing is a whole-brain task

# Shorter over longer

---

The brain learns best when  
content is divided in small chunks

# Different over same

---

The brain notices changes

# Apply

---

1. In small groups of 4, introduce yourself shortly (max 2 min in total)
2. As a group choose one Scrum Event to focus on. Agree on the essence of the Scrum Event (max 1 min) with your group.
3. Choose one or more of the six learning principles
4. What **activity** could you do that uses this learning principle?
5. Write down the activities from your group (**on separate sticky notes**)
6. Time left? think about another Scrum Event and write down activities.

# Apply

## DAILY SCRUM

Different over  
Same: start by  
talking about small  
wins

Images over  
words:  
Cameras on

STAND UPS:  
- different over same  
↳ stand up (literally)  
with a medicine ball

- stand ups in different  
settings/location

Online stand-up

coffee conversations

DIFFERENT.  
DO IT  
IN PERSON

Ice  
breakers

# Examples

## Daily Scrum

Talking over listening

Have everybody take a turn in sharing the progress toward Sprint Goal

## Sprint Retrospective

Different over same

Use a different format every Sprint Retrospective

## Daily Scrum

- Share the progress to the Sprint Goal in pairs first
- Check in round (happiness)
- Stand up and stretch
- Visualise your progress (drawing, Lego, balls)
- Rotation of moderation
- Improv theater for impediments
- Use Yes, and...

## Sprint Planning

- Do a celebrity interview with the PO on the why
- Write the items on sticky notes and put them on the wall or floor
- Visualise the business value
- Draw your Sprint Goal
- Create a comic strip of your Product Backlog Item
- Product Backlog Items as images
- Put Product Backlog Items on a wall and make team move from PBI to PBI
- Refine in a fishbowl format

My 2 cents

## Sprint Retrospective

- Let everybody talk (by using 1-2-4-ALL)
- Try different formats to sparkle creativity in problem solving
- Draw images to illustrate your feelings
- Use 'What do you Meme' cards about how the last Sprint went
- Constellations

## Sprint Review

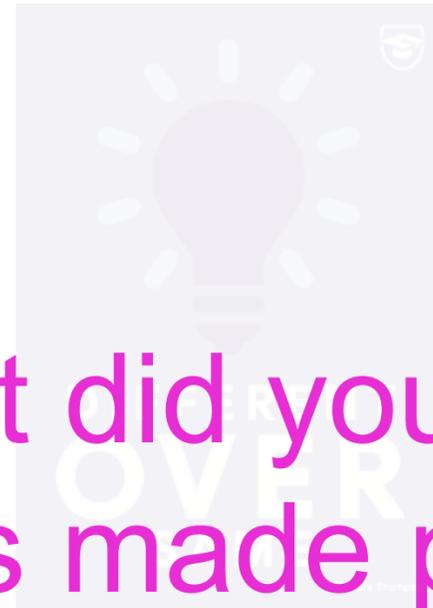

- Write down stakeholder feedback on sticky notes
- Do a shift and share (or gallery walk) with the different topics/elements
- Let stakeholders handle the mouse (demo stations)

## Sprint

- Take a walk during lunch time
- Pair programming or switch roles
- Make a visual Scrum Board
- Draw the working agreements
- Create a compliment wall

In this talk, which brain science principle have you seen used?  
Show the card you have seen used

And what did you notice?  
What was made possible?  
What effect did this have on you?

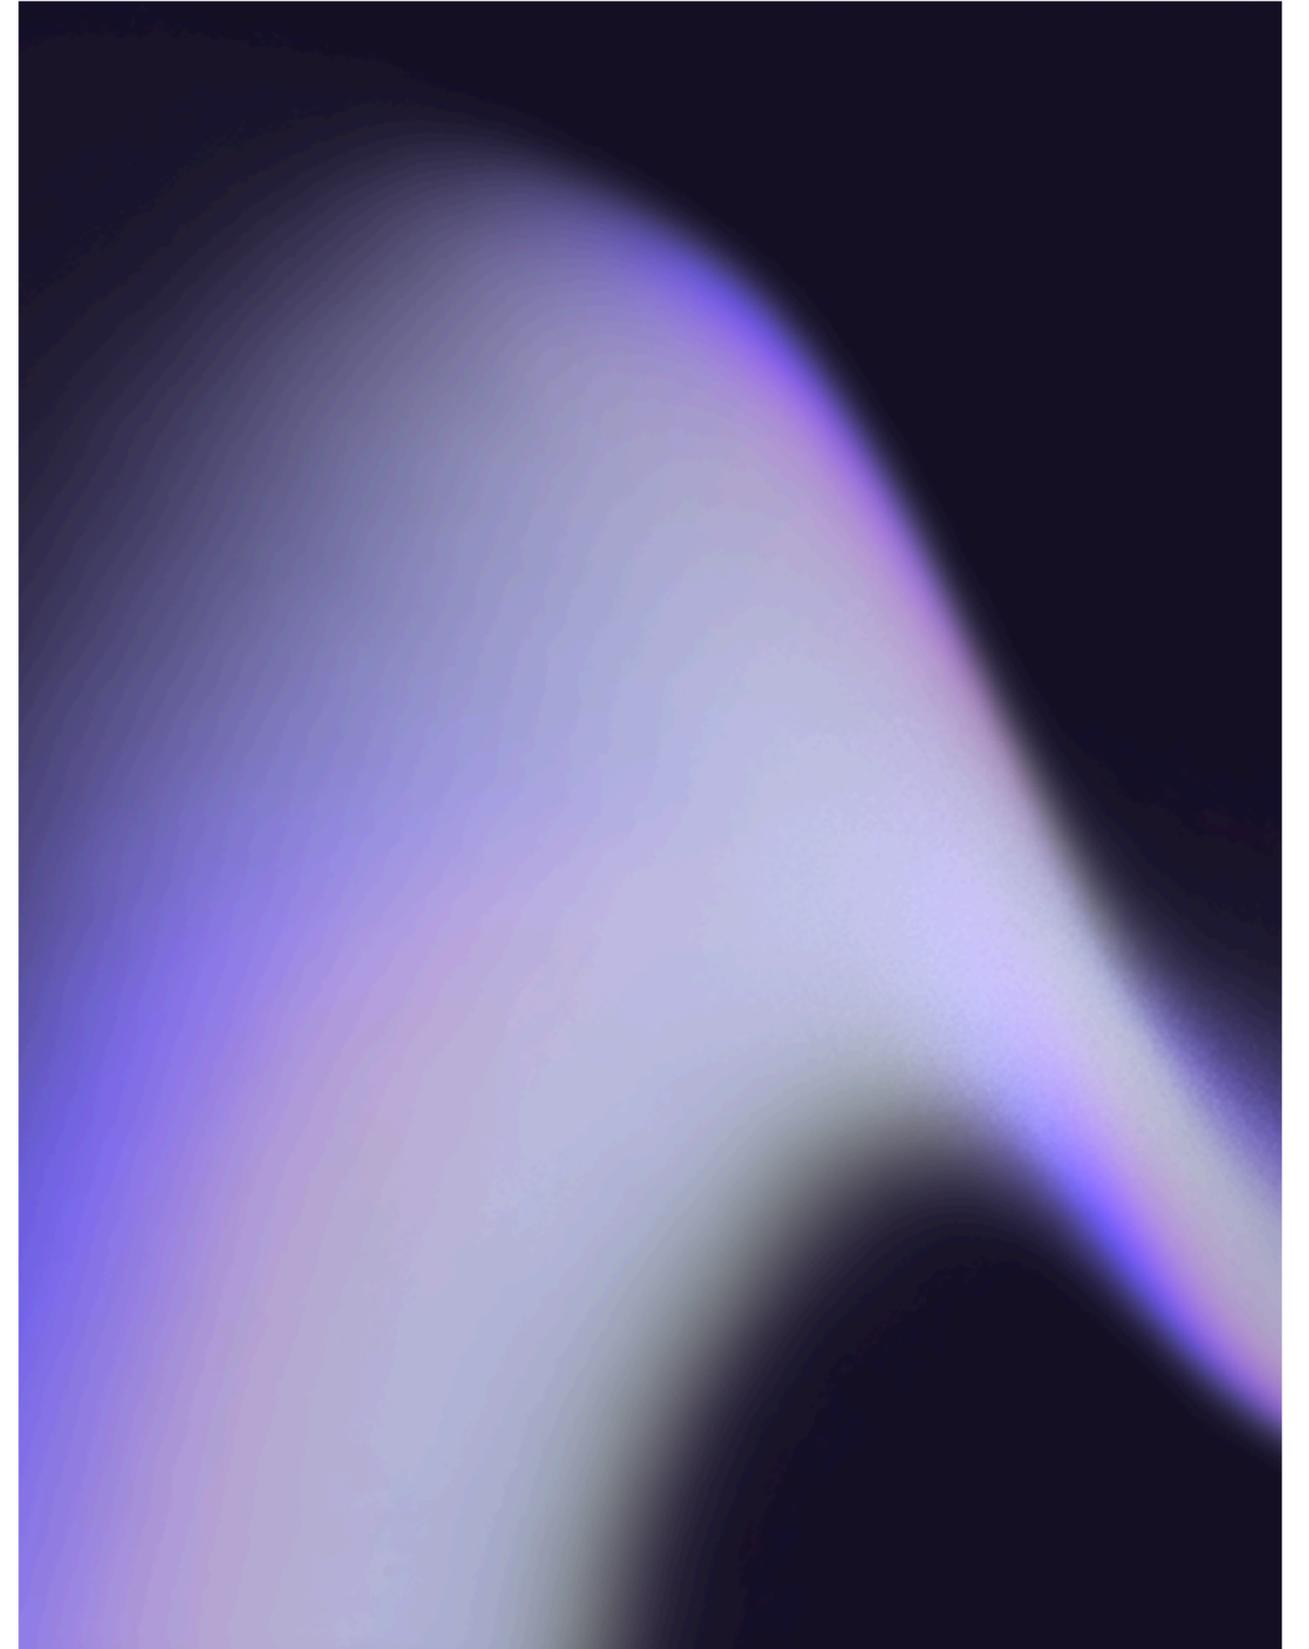

# Conclusion

---

Of the 6 learning principles which one is most challenging for you?

Hold up that card, find someone who has a different card and give and get help

**Using the learning principles in your Scrum  
Events is not so difficult,  
you just have to experiment with it  
and inspect and adapt :)**
